

Important Update on GHK-Cu Push Patch Formulas

Dear Provider,

We hope this message finds you well. We wanted to provide an important update regarding the recent addition of GHK-Cu to the Push Patch formulas.

As you may notice, the GHK-Cu may not fully dissolve in the patch, and we want to reassure you that this is completely normal. We included GHK-Cu free of charge as an added benefit to help mitigate potential skin irritation caused by the iontophoresis technology. Because the patch works by gently penetrating the skin barrier to enhance supplement absorption, some users may experience mild irritation. The GHK-Cu has been added specifically to support skin repair and reduce irritation while maintaining the efficacy of the core ingredients.

Please don't hesitate to reach out if you have any questions or need further clarification. We appreciate your continued support and partnership in helping patients experience the best in transdermal wellness.

Thank You,
Push Patch Team
